The Franklin & Marshall College Poll is produced in conjunction with the Philadelphia Daily News, WGAL-TV (South Central PA), Pittsburgh Tribune Review, WTAE-TV (Pittsburgh), WPVI-TV6/ABC (Philadelphia), Times-Shamrock Newspapers, Harrisburg Patriot-News, and Lancaster Newspapers. It may be used in whole or in part, provided any use is attributed to Franklin & Marshall College.

Key Findings

The February 2012 Franklin and Marshall College Poll finds former US Senator Rick Santorum gaining momentum in his home state as he has nationally. Senator Santorum is currently well ahead of his Republican primary rivals in Pennsylvania, and he has trimmed President Barack Obama's lead in the state compared to one month ago.

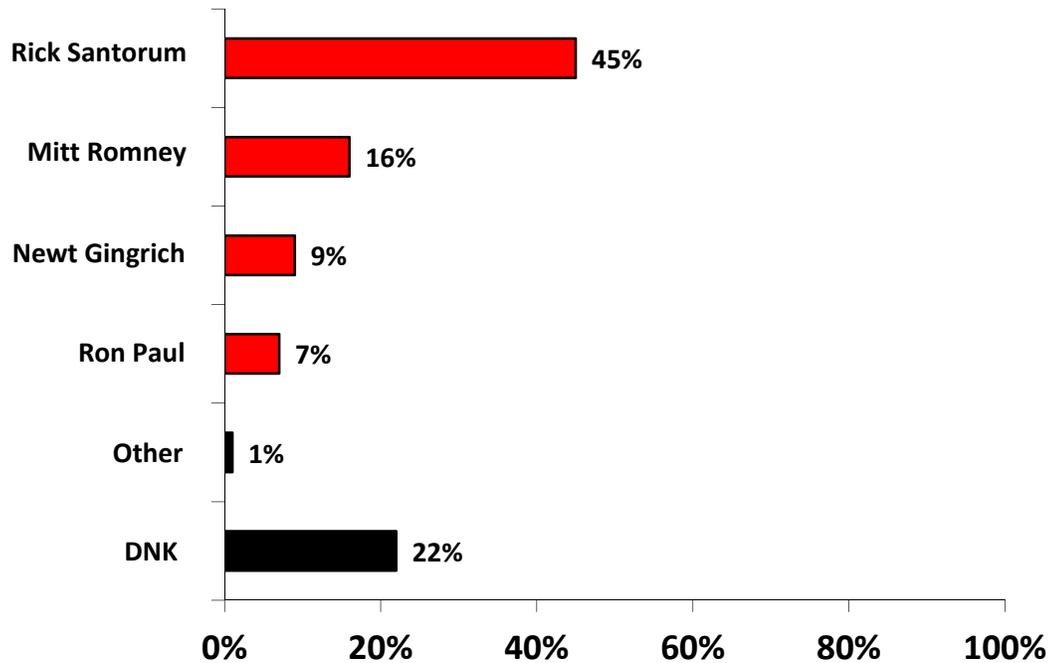

The Republican Presidential Primary

Rick Santorum's victories in three primaries a few weeks ago helped propel his candidacy nationally, and this momentum has spilled over to Pennsylvania. His favorable rating among Pennsylvania Republicans has risen from 46% in January to 63% now. Mitt Romney's favorable ratings have remained more consistent among Republicans, declining a bit from 46% to 40%.

Rick Santorum leads Mitt Romney by a wide margin among Republicans, 45% to 16%. Equal proportions (46%) of Santorum and Romney supporters are still making up their minds about who they expect to support in the April Pennsylvania primary. A plurality (43%) of Santorum supporters says that Romney is their second choice for the nomination. Similarly, a plurality (43%) of Romney supporters says that Santorum is their second choice for the nomination.

Figure 1: Republican Presidential Primary Horse Races, Pennsylvania February 2012

If the Republican primary election for president was being held today and the candidates included [rotate] Ron Paul, Mitt Romney, Rick Santorum, and Newt Gingrich would you vote for...., some other candidate, or aren't you sure how you would vote?

Republicans in the state believe a strong moral character (36%) or having the right experience (23%) are the main qualities they desire in a nominee. Fewer cite the ability to beat President Obama (18%) or being a true conservative (13%) as being the most important characteristic they want in a nominee.

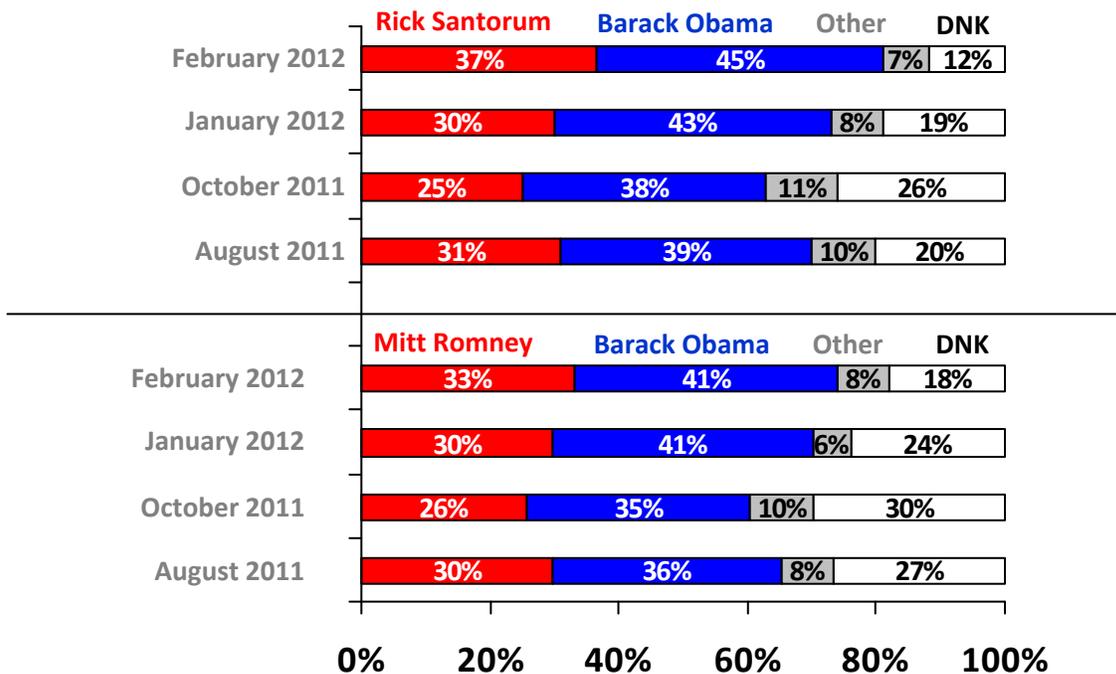

Just as many Pennsylvania Republicans say the Republican presidential debates were the most important reason they are choosing to vote for a specific candidate (12%) as say it makes no difference in their preference (13%).

The General Election Race

President Obama continues to lead all of his potential Republican challengers in Pennsylvania. Mitt Romney and Rick Santorum are the President's strongest challengers at the moment, but both trail President Obama by about eight points. The president's lead over Rick Santorum is smaller than it was in January. Newt Gingrich and Ron Paul both trail the president by double digits. President Obama's job performance and hard re-elect ratings show slight improvements in the state since January.

If the November 2012 general election for president were being held today and the candidates were [rotate] [fill candidate] the Republican and Barack Obama the Democrat, would you vote for [rotate] [fill candidate] or Barack Obama, some other candidate, or aren't you sure how you would vote?

Methodology

The survey findings presented in this release are based on the results of interviews conducted February 14-20, 2012. The interviews were conducted at the Center for Opinion Research at Franklin & Marshall College under the direction of the poll's Director Dr. G. Terry Madonna, Head Methodologist Berwood Yost, and Senior Project Manager Angela Knittle. The data included in this release represent the unweighted responses of 592 Pennsylvania registered voters, including 256 Democrats, 278 Republicans, and 46 registered as Independent/Other. The sample of registered voters was obtained from Voter Contact Services. Survey results were weighted (age, gender, and party) using an iterative weighting algorithm to reflect the known distribution of those characteristics as reported by the Pennsylvania Department of State.

The sample error for this survey is +/- 4.0 percentage points. The sample error for registered Democrats is +/- 6.1 percentage points and for Republicans is +/- +/- 5.9. In addition to sampling error, this poll is also subject to other sources of non-sampling error. Generally speaking, two sources of error concern researchers most. Non-response bias is created when selected participants either choose not to participate in the survey or are unavailable for interviewing. Response errors are the product of the question and answer process. Surveys that rely on self-reported behaviors and attitudes are susceptible to biases related to the way respondents process and respond to survey questions.
